

Waterproof Computer Case

YF-4636

1.Computer case material is polypropylene, waterproof, with keyhole, soft rubber handle, comfortable in the use of hands.

2.The knob in the middle of the handle is a manual air guide valve device. If the pressure in the box body is too large to open the upper cover, unscrew the air guide valve to adjust the air pressure.

3.Security keyhole can be installed with a combination lock, four lock design, sealing secondary anti-opening technology, box connecting shaft for 201 stainless steel shaft.

4.The standard universal sponge lining is 2560 blasting sponge, with high density and good shaping. The small square cutting has been made, and the shape can be deducted according to the product shape.

Mesh sponge can be torn by hand, the size of about 10mm square.
